

ABSTRACT OF THE DISCLOSURE

[0056] A method by which photographic images taken by a photographer using a digital camera having mass storage capability are efficiently organized within a computer so as to be quickly and easily located, viewed and purchased by customers of the photographer. The photographic images taken by the camera are copied into high resolution and low resolution images. The high resolution images are transferred to a high resolution storage. The low resolution images are downloaded to the computer to be located within a folder structure according to markers assigned by the photographer to distinguish different sets of images by subject. An image display is provided to enable customers of the photographer to access, view and purchase images by completing an order form via a remote or a home computer. An order viewer is provided to enable the photographer to review, edit and fill the order of a customer by transmitting the high resolution images from the high resolution storage to a photo lab for processing.
